

Quick notes

Demo with Petify for Shelters (Sarah Schertel)

Sep 10, 2026

[Johnny Shin](#) sschertel@ltbhs.org [Tony Kim \(Tony\)](#)

Workflow software demonstration with operational feedback and API integration requirements.

Shelter Operational Workflow & Challenges

- Sarah oversees daily animal care, intake planning, and movement tracking, including successful animal outcomes.
- Manual paper-based processes in shelter medical procedures frequently cause duplicate work and data inconsistencies.
- Medical and surgery notes require better visibility across departments to support efficient adoption and animal care.

Dashboard Functionality & User Experience

- Johnny presented a mobile-friendly web dashboard featuring centralized workflow tracking and automated "needs attention" notifications.
- Sarah requested bulk editing capabilities to streamline repetitive tasks like kitten vaccinations.
- The team discussed adding history logs to the dashboard to facilitate auditing of past task completions.
- Sarah requested a "back" button within the workflow creation flow to simplify navigation during administrative setup.

Task Assignment & Notifications Strategy

- Sarah recommended assigning tasks by department or role rather than to individuals to account for staff turnover and scheduling changes.
- The team explored customizing user dashboard views to align with specific job functions, such as medical versus behavioral roles.
- Sarah indicated that centralized dashboard notifications are preferred over email or messaging apps to minimize communication fragmentation.

Workflow Management & Customization

- Johnny demonstrated a workflow creation tool allowing custom mapping of sequences, stage transitions, and attention triggers.
- The system supports variable application filters, allowing workflows to be applied to new, selected, or all current animals.
- Sarah proposed splitting "vaccination" tasks into DVM-specific and assistant-specific categories to align with regional regulations.

Technical Integration & API Requirements

- Sarah emphasized that API integration with existing shelter management software is a strict requirement for adoption.
- Johnny identified API development as the strategic priority to eliminate the need for manual CSV data imports.
- Sarah identified "Shelter Luv" as a growing industry standard for potential future integrations.

Pilot Program Engagement

- Johnny proposed a pilot program involving a 3-month free service period in exchange for product design feedback.
- Sarah offered to facilitate beta testing introductions to other organizations once API connectivity is successfully established.

Pilot Program and API Strategy

- Johnny Shin proposed sending a draft of the non-binding pilot contract for Sarah Schertel to review.
- Sarah Schertel stated that the pilot project likely cannot proceed without successful API integration.
- Johnny Shin confirmed the team is actively prioritizing the development of the necessary API infrastructure.

Next steps

[Tony] Implement Bulk Edit: Add functionality to update animal records in bulk for similar tasks.

[The group] Enable Department Assignment: Implement logic to assign workflow tasks to departments instead of individuals.

[Tony] Develop API Integration: Build an API connection to sync data with existing software like Pet Point.

[Johnny] Configure Workflow Defaults: Adjust default categories to separate DVM and assistant tasks while refining adoption and behavior evaluation processes.

[Johnny] Implement Audit Tracking: Add history logs to record and verify past task completions for auditing.

[Johnny Shin] Research Petbridge: Investigate the software capabilities and requirements for website integration.

[Tony Kim] Implement Daily Digest: Send automated emails to the inbox detailing daily tasks and dashboard information.

[Johnny Shin] Draft Pilot Contract: Create a document outlining product involvement, 3 months of free service, and commercial transition terms.

[Johnny Shin] Build API Integration: Develop necessary connections with shelter management software systems to facilitate data exchange.

[Sarah Schertel] Connect Beta Testers: Facilitate introductions to other organizations using compatible software once the connection is established.

Meeting records [Transcript](#)

Summary

Workflow software demonstration with operational feedback and API integration requirements.

Petify Workflow Demo

Demonstration of dashboard tracking and workflow features received positive feedback.

Feature Requests and Customization

Discussion highlighted needs for bulk edits and role-based routing.

API Integration Requirements

Pilot agreement depends on developing seamless third-party software integration.

Decisions

Needs Further Discussion

- **Pilot program participation conditions** Participation in the proposed three-month free pilot program was deferred and made contingent upon the successful establishment of a connected API integration with the shelter's management software.

Next steps

- [Tony] Implement Bulk Edit: Add functionality to update animal records in bulk for similar tasks.
- [The group] Enable Department Assignment: Implement logic to assign workflow tasks to departments instead of individuals.
- [Tony] Develop API Integration: Build an API connection to sync data with existing software like Pet Point.
- [Johnny] Configure Workflow Defaults: Adjust default categories to separate DVM and assistant tasks while refining adoption and behavior evaluation processes.
- [Johnny] Implement Audit Tracking: Add history logs to record and verify past task completions for auditing.
- [Johnny Shin] Research Petbridge: Investigate the software capabilities and requirements for website integration.
- [Tony Kim] Implement Daily Digest: Send automated emails to the inbox detailing daily tasks and dashboard information.
- [Johnny Shin] Draft Pilot Contract: Create a document outlining product involvement, 3 months of free service, and commercial transition terms.
- [Johnny Shin] Build API Integration: Develop necessary connections with shelter management software systems to facilitate data exchange.
- [Sarah Schertel] Connect Beta Testers: Facilitate introductions to other organizations using compatible software once the connection is established.

Details

- **Meeting Introduction and Workflow Overview:** Johnny Shin (Business Development Director at Pent Now) and Tony Kim (Chief Strategy Officer at Pent Now) met with Sarah Schertel (Shelter Operations Manager) and another team member named Sarah to discuss Petify, a shelter management software built by Pent Now ([00:03:31](#)). Sarah Schertel explained their role managing daily animal care, intake planning, outcomes, cleaning, and supplies ([00:06:34](#)). Addressing Johnny Shin's question about operational bottlenecks, Sarah Schertel noted that paper-based processes cause redundant work, particularly during adoption prep and medical procedures like surgery days. During surgery days, a veterinarian handling 10 to 15 animal records must enter individual notes and update statuses manually, which leads to missed

steps—such as unrecorded sterilizations—and leaves front desk staff uninformed about animal adoption readiness ([00:07:48](#)) ([00:10:31](#)).

- **Petify Workflow Tracking Feature Demo:** Johnny Shin demonstrated Petify's web-based, mobile-friendly dashboard, highlighting workflow tracking capabilities such as assigning due dates, tracking staff assignments, and viewing active workflows per animal ([00:12:01](#)). Johnny Shin showed how an assigned staff member (e.g., Alex) receives automated notifications with context regarding missing records (e.g., a missing dog-to-dog evaluation record) and can attach records directly to update the dashboard status to "on track" ([00:15:42](#)). Sarah Schertel complimented the design of attaching Petify to existing software rather than reinventing shelter management platforms ([00:20:34](#)).

- **Bulk Editing Capabilities:** In response to the demo, Sarah Schertel requested a bulk edit feature so staff members can complete repetitive tasks—such as evaluations showing no significant findings across multiple animals—without writing repetitive individual notes. Sarah Schertel emphasized that bulk updating is critical for larger municipal shelters. Tony Kim and Johnny Shin confirmed that bulk actions are fully doable and noted that bulk action controls were incorporated into the system ([00:19:08](#)) ([00:57:23](#)).

- Task Assignment and Departmental Routing:** Discussing how tasks should be assigned, Sarah Schertel recommended routing notifications to functional departments or specific roles (e.g., animal care, behavior, veterinarian, technician, shelter coordinator) rather than individual staff members (00:21:51) (00:26:39). Sarah Schertel explained that individual assignments risk tasks getting lost when a worker is on vacation or off-duty, whereas department- or role-based task queues ensure continuous coverage (00:22:57) (00:26:39).
- Notification Preferences and Permissions:** Tony Kim asked about preferred notification channels, such as SMS or web app alerts. Sarah Schertel stated that workers strongly prefer in-app dashboard notifications over SMS or personal phone push alerts to preserve work-life balance in high-stress shelter environments (00:25:29). Sarah Schertel also advocated for configurable permission levels, noting that while they require oversight visibility across all departments, other staff members only need access to tasks relevant to their specific operational responsibilities (00:24:15).
- Historical Audit Logs and Task Dashboard Functionality:** Discussing real-time updates and completed task tracking, Sarah Schertel cautioned against using an internal messaging inbox, explaining that extra communication channels lead to lost information (00:28:09) (00:30:15). Instead, Sarah Schertel requested a centralized dashboard task list alongside historical audit logs so managers can verify past updates if records are altered. Tony Kim noted that Petify can provide historical archiving functions and optional daily digest emails summarizing pending tasks (00:29:04) (00:57:23).

- Workflow Creation and Customization Engine:** Johnny Shin presented the workflow creation interface in Petify's settings, demonstrating how administrators can build blank or template-based workflows (e.g., medical care), set completion requirements, define attention triggers, assign run frequencies (one-time vs. recurring), and apply workflows selectively to all current animals, new intakes only, or chosen subsets (00:32:35) (00:35:25). Sarah Schertel confirmed the creation tool was user-friendly, requested a browser navigation back button, and appreciated the flexible assignment options for targeted scenarios, such as managing disease outbreaks or escalating specific behavior reviews to management (00:34:12) (00:38:33).

- Data Preservation and Browser Navigation:** Sarah Schertel inquired whether opening multiple browser tabs under the same username would disrupt active sessions or erase unsaved workflow data, referencing past issues with their legacy software, Pet Point (00:47:49). Tony Kim assured

Sarah Schertel that Petify preserves input data across screens and supports multi-tab operations without kicking the user out (00:48:53).

- : * **Vaccinations** : Split into distinct "DVM/Veterinary Tasks" (e.g., rabies vaccines, surgeries restricted by state law to licensed veterinarians) and "Assistant/Technician Tasks" (e.g., preventive care, distemper shots)
 \=CITATION:36=\.
- * **Adoption and Publishing** : Split into separate stages, such as "Adoption Readiness," to separate adoption paperwork prep from marketing activities
 \=CITATION:36=\ \=CITATION:38=\.
- * **Behavior Evaluation** : Modify the workflow so it applies selectively rather than by default to every intake, as routine evaluations for large litters are handled during general medical exams
 \=CITATION:37=\.
- * **Foster & Extended Care** : Add dedicated workflows for foster tracking and extended care timelines (e.g., neonate kittens requiring six-week hold periods prior to surgery)
 \=CITATION:38=\.

- **Third-Party API Integrations and Pilot Next Steps:** Johnny Shin outlined the next steps, proposing a pilot agreement where Pent Now builds a tailored product, offers three months of free use, and transitions to a commercial contract (00:58:26). Sarah Schertel stated that their shelter cannot participate in a pilot or commercial rollout without seamless API integration with their existing shelter management software (such as Shelterluv or Pet Point) and website integration tools (like Petbridge), as manual data entry via CSV files is unviable for their operation volume (00:41:18) (00:43:25). Sarah Schertel advised Pent Now to prioritize building an API for Shelterluv, noting it is becoming the predominant industry platform while Pet Point is phasing out its legacy product (00:59:49). Johnny Shin and Tony Kim committed to prioritizing API development for shelter management systems (00:43:25) (01:00:42).

- **Pilot Contract Draft and API Integration:** Johnny Shin asked if they could send Sarah Schertel a draft of the pilot agreement, noting that it is not legally binding so Sarah Schertel can back out at any time, while Johnny Shin's team works on resolving issues with the API. Sarah Schertel agreed to review the draft but maintained transparency by stating that the project will likely not move forward without the API resolution ([01:02:33](#)).
- **Meeting Wrap-up and Next Steps:** Sarah Schertel expressed appreciation for the extensive work completed by Johnny Shin and their team and noted excitement to see the final output, inviting them to send over the document so they can connect later. Johnny Shin and Tony Kim (Tony) thanked Sarah Schertel, and the participants exchanged pleasantries before concluding the meeting ([01:02:33](#)).

The screenshot displays the Petify for Shelters application interface. On the left is a sidebar with navigation links: Dashboard, Animals, Check-ins, Fosters, Publishing, and Settings. The main content area is titled 'Workflows' and shows a 'Create a workflow' form. A modal window titled 'Choose who gets it and how it runs' is open, showing options for 'Default', 'Manual', 'Once', and 'Recurring'. The 'Default' option is selected under 'Which animals start this workflow?', and the 'Once' option is selected under 'How does this workflow run?'. The 'Continue to stages' button is visible at the bottom right of the modal.

Demo with Petify for Shelters (Sarah Schertel) - Transcript

00:03:31

Tony Kim (Tony): And you are seeing

Johnny Shin: Still name.

Tony Kim (Tony): Oh, come. Oh, sorry.

Sarah Schertel: Hi Tony, how are you? And hi Tony.

Johnny Shin: Hi Sarah.

Sarah Schertel: I have your sound down. You can hear me though. Is that all right?

Johnny Shin: I can as a

Sarah Schertel: Oh,

Tony Kim (Tony): Yeah,

Sarah Schertel: now I can.

Tony Kim (Tony): thanks.

Sarah Schertel: Awesome. So, I made it really difficult.

Johnny Shin: um is Oh,

Sarah Schertel: And this is also Sarah, so you don't really have to remember too much.

Johnny Shin: okay.

Tony Kim (Tony): Oh.

Sarah Schertel: But Sarah is um our shelter operations manager.

Johnny Shin: Mhm.

Sarah Schertel: So she handles a lot of the in and outs of the things that we're looking to track here and then also has a fair hand in the foster program here. So should be able to give you a good eye in.

Johnny Shin: Very nice to meet you, Sarah. Um,

Sarah Schertel: Nice to meet you, too.

Johnny Shin: I'm I'm Johnny.

00:05:04

Johnny Shin: Uh, I'm the business development director at Pent Now. Um, and that's Tony, our chief strategy officer.

Tony Kim (Tony): Nice.

Johnny Shin: Um, and we're I mean as I I I mean you may heard from uh another Sarah. Um I uh we are building a software I mean a a shelter software uh shelter management software called Petify for shelters. And I interviewed um Sarah a few weeks ago and had a lovely talk. um and decided to have a follow-up session um today um to uh to dive deeper um on the features that you might need um so that we can build around build our pilot product around your needs. So, I will show you guys a little bit different demo today, a bit more detailed version. Um, but before the demo, um, I would like to ask a similar question that I already asked. Uh, how should I how should I

Tony Kim (Tony): Cole. Oh,

Sarah Schertel: You you can just say Sarah A and Sarah B or whatever whatever you want.

Johnny Shin: m So the so the thing is this morning so

00:06:34

Sarah Schertel: It doesn't matter. We we deal with this every day.

Johnny Shin: this morning this morning I I had a meeting with two Rachel's and tonight I'm h I'm having a meeting with two Sarah. So it's it's kind of a twinning it's kind of twinning day for me.

Sarah Schertel: Love it.

Johnny Shin: Um,

Sarah Schertel: Love it.

Johnny Shin: so, okay. So, I I I asked some similar questions uh a few weeks before to to

Tony Kim (Tony): speech speech.

Johnny Shin: Sarah. So, to to another Sarah, I would also ask you the same question. Um, we could start from uh an easier one. Um, so could you brief tell me about your role and which parts of the animal care or shelter workflow you personally touch most often?

Sarah Schertel: So, I oversee the the day-to-day care of the animals. Um, intake, so planning, which animals are coming in. Um, I oversee kind of um the the outcomes, too. So, which animals are are leaving the shelter. Um, and then the daily care, so cleaning, um, and making sure that that everybody's cared for and have has the supplies that they need, too.

00:07:48

Johnny Shin: Um Sarah uh Sarah a um miser previously described uh paperlets becoming

Sarah Schertel: Yeah.

Johnny Shin: outdated and sometimes s leading to duplicate work. Um from your role, where does that problem show up for you if at all?

Sarah Schertel: um with duplicating work.

Johnny Shin: Yes.

Sarah Schertel: Uh

Johnny Shin: I I mean the the paperless kind of is the root cause of the uh the outdated or sometimes leading to duplicate work. Is it uh does that go for you the same or a bit differently or not at all?

Sarah Schertel: it's probably the same like we we do we use the same software and and use the same processes and like I had said to him that the most paper gets used in in the the shelter med space. Like sort of the like the preparation for adoption is where we use the most paper that we'd like to try and get away from.

Johnny Shin: Um, what information most often need from someone else before you can finish your part of the work.

Sarah Schertel: medical information. Mhm. So, medical exams, surgery notes, medications they're on.

00:09:20

Johnny Shin: Um,

Tony Kim (Tony): Jesus.

Johnny Shin: and once you finish something, who needs to know about it?

Sarah Schertel: Um, well, I feel like every everybody that handles the animals, everybody that is doing adoptions need and anybody that's interacting with the animals needs the information so that they know how to properly care for the animals and and how to uh educate adopters on what's going on with each individual animal.

Johnny Shin: Um, this goes Mhm.

Sarah Schertel: And and the way that our current shelter sorry the way that our current shelter software works is that essentially when one person is done with their role in getting the animal ready

Johnny Shin: Mhm. Mhm.

Sarah Schertel: they change the stage of the animal. Um so when an animal first comes in it'll be um it'll be put in pending medical assessment. Then if it needs any sort of treatment it can get put into it'll be put into needing medical treatment.

Johnny Shin: Mhm.

Sarah Schertel: um needing medical update. Medically clear is what triggers these guys to make the animal available.

Johnny Shin: Okay.

00:10:31

Johnny Shin: So I think it's I mean of course I but but you guys do kind of share similar aim points especially on the the medication and the medical part. Um in your day-to-day work what is the biggest thing that slows you down or gets missed?

Sarah Schertel: Um I guess maybe uh surgery days um because there's a lot more records for our veterinarian to put in. Um, so when there are, you know, 10 to 15 records and she's going in and putting notes for each individual animals, um, sometimes things can get missed just simply because there's a lot to input.

Johnny Shin: Okay. Um,

Tony Kim (Tony): Could you could you share some examples uh of that surgery day uh which led some which led to some problems?

Sarah Schertel: Um, so let's say there's a litter of six kittens. Um, and so they're going to have similar notes. Um, that our vet has to do an exam for each of those animals and then also change each of their statuses. So there could be like, you know, two that will be missed and we'll sterilization.

00:12:01

Sarah Schertel: So my front desk doesn't know that they can go up for adoption and there's no way to trigger the veterinarian necessarily to say these are the animals that need to be taken that need your attention today.

Johnny Shin: Hey,

Sarah Schertel: Right? So and when she completes one, there's no way to say, "Oh, I already did these ones." Right? They just go away and then they're like off in a different land.

Johnny Shin: got it. Um, I think that would be I think it's a great time to show our our new demo. I'm going to share my screen. Um so this uh again this is the dashboard we we offer to all of our clients. Um this is web- based um but it's very much mobile friendly. Um so all of our I mean all of your SEF members uh can use this on their phone. So, uh, so it's pretty portable, um, and much much easier to kind of track down whenever you're on the go, uh, in your workplace. Um so starting off so at this demo we wanted to highlight um the workflow tracking feature in a more detailed um way.

00:13:58

Johnny Shin: Um so as you can see these are the lists the list of the dogs uh in the shelter and as you can see you can uh there's name I mean it's like basic information breed um age um gender um there's also a workflow progress next to it um so for example for this pepper dog named Pepper. Um the workflow um is set up for intake readiness and placement. Um and then and then there's the the needs attention tab um where what where the staff should see uh what should do next. Um so again naturally the next action would be place and foster. Um we also show you the due date for each uh step. Um so placing in foster would be due today. Um and who's handling the staff number and you can also check when's up uh when was last updated. So when we click this Milo, you can see uh Milo has three active workflows.

One's behavior evaluation, one's profile upkeep and one's vaccination. Um and there are three workflows and there are two things uh that need attention.

00:15:42

Johnny Shin: So if we move on to the things that needs attention um you can see this is the be the behavior evaluation workflow. Um, and as you can see, um,

Sarah Schertel: Mhm.

Johnny Shin: the behavior notes are updated, but the dogtod dog evaluation has not been recorded yet based on the workflow that your that your team has set up. Um, so you can see the condition, the evidence and next action all together in one screen. um also to everyone who's involved uh in this um system or or workflow. Um so the next action uh we assigned we assign it automatically. So as you can see there's a blue tab that says assigned work record dog to dog evaluation. So we continue. So this is the notifications that each um staff member gets. Um so for example, if Milo's uh handler is Alex, um the whole workflow notification uh for Milo goes to Alex or or multiple people if needed. Um, so again, this is Alex's notifications. So, behavior evaluation needs attention. That's the the the notification that Alex would see.

00:17:28

Johnny Shin: So, of course, Alex would click this notification to do her job better. Um, and then we give you why this action is needed. So basically we're giving her the the context of this process. Um so who who is needed Milo? What workflow behavior evaluation current stage assessment due date? No, I mean there should be a due date um today. Uh reason dog evaluation record is missing. Um and then we go straight to the the record evaluation. So this is how Alex would work um through this screen. And then after everything uh Alex could also attach the record and then voila, it's all done. So after the task is done, this information goes directly to the dashboard um so that Milo's workflow u could be updated. So again this time the behavior evaluation has changed to on track as you can see. Um so this is the the act one of our demo today. Um so this demo is more about the real um going with the the workflow process.

00:19:08

Johnny Shin: Um how could we notify the staff members and how could the notified staff member could work within this process? Um so quickly check um what do you guys uh what's your first impression of this feature Sarah's

Sarah Schertel: Um, is there a way to do like if let's say three animals all need the same, they all need a dog to dog, right? And I I evaluate all three of them and I don't have any concerns. Is there a way to like bulkedit those?

Johnny Shin: H um that's actually not the first um request um from so I I I did get the same request from other shelter. So I think that's doable.

Sarah Schertel: Okay.

Johnny Shin: Uh I think I think to Tony should work work things on but but yeah but I think it's doable.

Tony Kim (Tony): Yeah. Yeah, it's totally possible.

Sarah Schertel: Okay.

Johnny Shin: Yeah.

Sarah Schertel: I think that that that is really important especially for you know our shelter is a smaller shelter but

Johnny Shin: Green.

Sarah Schertel: especially um you know the much larger municipal shelters that we were talking about last time you know as much as we would love to write like individual beautiful like elaborate notes on every pet like the reality is is that a lot of this is going to be no significant findings

00:20:34

Johnny Shin: Mm-m.

Sarah Schertel: enter you know.

Johnny Shin: M

Sarah Schertel: So, um, yeah, I mean, I really I I really like the the workflow of how it's set up, and I I I feel like you guys are on to something with like, you know, having it be an attachment to like don't reinvent the wheel of making up the entire software.

Where? right? Like have this be an attachment to existing software so that you can say, "Hey, you know, activate this and it'll tell you everything that needs to be done."

Johnny Shin: Yeah, that's that's that's our game now. That's that's basically what we're trying to do.

Sarah Schertel: Yeah.

Johnny Shin: So, fingers crossed. Um, how about how about you, Sarah?

Sarah Schertel: Yeah. Well, similar to like bulk up I think bulk updates are are really important especially when we when we think about like just the the daily flow of our day and and our pain points are are you know waiting till records are updated. Um but also when it comes to um like assigning to individuals, how is there like one overseer that's like dishing it out and assigning it to

00:21:51

Johnny Shin: Oh,

Sarah Schertel: people or is there some sort of like trigger trigger that will auto assign it to

Johnny Shin: interesting.

Sarah Schertel: maybe somebody in a particular role like medical is assigned to you know people in a medical role and behavior is our behavior person or is it not even necessarily individual users

Johnny Shin: Um I I've

Sarah Schertel: but rather departments.

Johnny Shin: also heard the same request that it it uh that it would be better uh to assign it to the whole department than an individual. Um so we we might go to that route but also but I think also both can

Sarah Schertel: Come on.

Johnny Shin: exist. Um what was the first one that you mentioned? Um the uh the the the overseer thing.

Sarah Schertel: No,

Tony Kim (Tony): I

Johnny Shin: Um I think uh that's also doable.

Sarah Schertel: we lost you a little bit.

Johnny Shin: I I will show you.

Sarah Schertel: So, I didn't hear what you said.

Tony Kim (Tony): Oh,

Johnny Shin: Oh, okay. Okay. No worries. So, so going back to the first question, the the supervisor assigning things.

00:22:57

Johnny Shin: Um,

Sarah Schertel: I know.

Johnny Shin: now I will show you like a bit later for at 2. Um, when you create a workflow,

Tony Kim (Tony): heat.

Johnny Shin: you you do assign uh a person, but I don't think that's only limited to supervisor, but if that's possible, that's also doable. Um so again so this session is more like brainstorming what you want to see in your near future product.

Sarah Schertel: Yeah.

Johnny Shin: So just just tell everything to us and see what we can do. Um but yeah all noted.

Tony Kim (Tony): Yeah.

Johnny Shin: Um

Tony Kim (Tony): Uh what what is your uh preference? Uh do do you prefer to assign one oversee the supervisor or you prefer to uh assign some uh department or yeah the other things?

Sarah Schertel: I think department makes the most sense just because we never like hour. you know, certain people have like more of a set schedule, but then there's vacations and things like that. So,

Tony Kim (Tony): Mhm.

Sarah Schertel: if I assign something to to Sarah B, right, and then Sarah B's on vacation, it could get lost in that in that workflow.

00:24:15

Johnny Shin: Mhm.

Sarah Schertel: Um, versus if it's just in a shelter team or a medical team or a behavior team, then it's less likely to get, you know, shuffled through.

Tony Kim (Tony): Then do you want uh all the department member staff should be uh notified all together or uh you want to uh customizing that notification functions?

Sarah Schertel: Yeah. Um so like as it as our current shelter me um software works now we can set like associations for each individual staff member.

Tony Kim (Tony): Yeah.

Sarah Schertel: So, for instance, like my association is like everything, right?

Tony Kim (Tony): Oh

Sarah Schertel: Like I I can see everything because the reality is is like I don't really need to see any of it, but when I need to see something, I need to be able to see any of it.

Tony Kim (Tony): yeah.

Sarah Schertel: Um,

Johnny Shin: I'm going to click

Sarah Schertel: you know, but then I have other staff members who perhaps like would only need to be able to see the shelter stuff, not necessarily the medical like tasks. So I think that being able to kind of customize it on our end of like, hey,

00:25:29

Johnny Shin: All

Sarah Schertel: this person is being given more responsibility in the behavior area, right? So now we're going to change their association to also include behavior if they want to go ahead and start taking some of those tasks on.

Johnny Shin: right.

Tony Kim (Tony): Great. Then uh what kind of uh notification channel do you want to be notified like SMS or just for this web app or the other channels do

Sarah Schertel: I I think that the dashboard is really the only notification that I would I would expect folks to need. Um you know, we get a lot of push back on um like personal personal phones and things like you know like people want to keep the work life balance and it's especially important when you're working with the animals and we're in high stress all the time.

Tony Kim (Tony): Yes.

Sarah Schertel: So, I think that that dashboard is really like the perfect area to say, hey, I'm going to log into my dashboard. I'm going to see what tasks are due for my department or what, you know, for what my role is, right?

00:26:39

Sarah Schertel: And perhaps that's even maybe it's better to look at it by department and not necessarily uh I'm sorry, by role rather than department, right? Because a veterinarian is going to have different tasks than their technicians are. A animal care attendant is going to have different roles. and the shelter coordinator, right, who's handling all the paperwork side of things. So, I think almost that that would be like an animal care role could be, hey, we need to, you know, clean this dog's ears today. A behavior um role could be, hey, we need to do a dog to dog. A veterinarian, this animal needs a rabies vaccine. A technician, this animal needs a distemper vaccine, right? Um, and then they can just log into their own dashboard. Um, and and I guess I never asked that if this dashboard is for everyone gets their own login, right?

Tony Kim (Tony): Yeah,

Sarah Schertel: So yeah.

Tony Kim (Tony): it should be

Sarah Schertel: So like, okay, I'm going to log into my Petify today, find out what tasks are appropriate for the role that I'm in, and then people like myself or Sarah who can do multiple roles can log in and say, "Oh my god, wow, all of these things." And we can individually assign to people to

00:28:09

Sarah Schertel: Yeah.

Johnny Shin: Okay. Um,

Sarah Schertel: And we have we have some people that do have like the hybrid roles.

Johnny Shin: yeah.

Sarah Schertel: So when it comes to like notifications, I also wonder if like if say like I'm off yesterday and I come in, are the notifications that have already been completed going to continue to show up on my

Tony Kim (Tony): Okay.

Sarah Schertel: notification dashboard if they were like completed while I was gone? Like do those notifications update in like real time if a task assigned to like multiple people? Like if you do it,

Tony Kim (Tony): Yeah.

Sarah Schertel: is this gonna show up for me? Yeah. And I think it would show as like in progress, right? Or like in in review or something like it. So it updates in this like the do area. Um or no, not in the do area, but it does like update it like in progress or like no longer needs attention. Okay.

Tony Kim (Tony): Yeah,

Sarah Schertel: So,

Johnny Shin: Right.

00:29:04

Tony Kim (Tony): I think

Sarah Schertel: like if back to that the one that we did the dog to dog or you could run through a completely different one right now too to just sort of show her like hey let's go ahead and just like finish a task right now and see what it looks like on the dashboard. Word.

Tony Kim (Tony): Yeah. Uh I think we can uh provide some uh notification uh inbox and you can check whether this notify things are already done or not. So history occurring uh functions can be provided also. I think that might uh fit to your needs.

Sarah Schertel: Amen.

Johnny Shin: Right. Because the last time we spoke, Sarah, um you were really interested about um seeing like past history of of each pet profile or each update in pet profile.

Sarah Schertel: Yes. Yeah.

Johnny Shin: So I think we can we can do that also. So, in in like past notifications um if needed um as Tony said,

Sarah Schertel: Yeah, I think that that part is important mostly for like the audit of something, right?

00:30:15

Sarah Schertel: So if it's if somebody says, "Oh yeah, I finished that, you know, two weeks ago and somebody, you know, undid it." I can go back and I can check to say, "Hey, it's okay."

Johnny Shin: M.

Sarah Schertel: We just didn't do it." Right? I I would stick away I would I would try to stick away from something like an inbox because we have so many ways of communicating with each other now that things tend to get lost. So, uh, so for instance, like for me, if it's not in an email, it didn't happen, right? Like if you ask me for for something, it has to be in an email because like that's the way I know it'll get done versus we have other folks that

Johnny Shin: Yeah.

Sarah Schertel: want it in a team's message, right? Versus like for me, a team's message is like old school AIM, like you know, whatever. I put my away message on and I I take off, right? um if we have like another inbox, I fear that something will get lost versus I really really like the functionality of being able to pull up that dashboard and say, "Here are my tasks that are appropriate for my role. I'm going to check each one of these tasks off." um and and be able to,

00:31:26

Sarah Schertel: you know, I mean, like if you were to look at um at any one of the ones that we're looking at now, like it seems really easy to be able to just like hit place in foster, be able to like punch in your foster information, complete. Done. Now I've checked that off of the list. And I think that's the the um the like addition to the shelter softwares that we're really missing right now, right? Is that um there isn't a simple way to just like here's my task list for today, right?

Johnny Shin: Eat.

Sarah Schertel: Here's what is appropriate for my very specific role and allow me to just like this is what needs attention right now. Let's check all of these off really quick. Now I can rep prioritize what's still left.

Johnny Shin: M m correct. I so I I think I think that's exactly why you you your team might need like multiple workflows in one pit profile. Um so I will go back to the demo which is act two.

00:32:35

Johnny Shin: Um I know we love some act one and two right.

Sarah Schertel: Yeah, I think that's funny.

Johnny Shin: Um um so yeah so this is the second part of the work uh of a demo. This is mainly about creating a workflow um uh within your team. So, uh the Workflow creation starts uh in the settings tab. Um and there is a workflow library. Um and it says adoption and publishing, vaccination, behavior evaluation, profile upkeep. Um anything you want you can create. So, um there's also a um a a set a default setting. So, if you if you want this workflow to be a default, you can set set it up like it uh like this one. Um and you can also set up how many times you want to repeat this workflow within one pet profile. So for example, um adoption and publishing only once, vaccination only once, but profile upkeep recurring um to kind of update uh until they get adopted. So and there's also a a toggle that you can switch on and off whenever you want.

00:34:12

Johnny Shin: Um, and moving on, you can add workflow uh by clicking this button and there's a blank workflow. Don't worry, it it looks a bit scary, but when you click this button,

Tony Kim (Tony): Yes.

Johnny Shin: there should be uh a form starting from a workflow name. So for example, it could be medical care and description track required medical review and clearance. Um and then

Sarah Schertel: That is not scary at all. Johnny give you a tour of our current shelter medicine software. That's scary.

Johnny Shin: that's that's okay. Got it. Got it. Okay. I'm I'm so glad that that this is not scary. Um so who who are we applying to? Um, so again, is this going to be a

default one or is this going to be uh a more customized for each pet profile? Um, run type again it could be once, it could be recurring. And then after you set it up,

Sarah Schertel: So that could be like to do a behavior.

00:35:25

Johnny Shin: so we are uh setting up all the stages for for one workflow. So you're literally mapping your own sequence of of the whole process. So for example, the first one uh would be initial medical review. Um and then um so so for the first process initial medical review uh we have to set up a completion requirement. Um So what uh what record or item um should be done um to finish this process. Um if you want to put the operator, you can put in the operator field. Um value means uh this field you you will put in the record. Um and for timing uh for example due date also set per animal uh attention trigger uh you can set up all the text for all these attention triggers. So this attention trigger uh will be popped up I think like needs review tab. Um next action also it's more on nudging what would come next. Um so stage transition it could be automatic after this is done or it could be manual confirmation if if we do not trust the machine.

00:37:05

Johnny Shin: Um so you can review the workflow after you guys set set it up. Um okay I will go over this. Yes. going to review. Um, so this is so you can see at a glance what this workflow looks like and what is the right order for this workflow specifically and if there's no issue

Sarah Schertel: And this is like the Oh, sorry. This is like the admin setting, right? This is like where Okay.

Johnny Shin: correct. So if if everything's right then you're moving on to creating workflow and then before um going straight to the the library we ask you guys where should we apply this workflow um like to animals currently in care.

Sarah Schertel: That's actually interesting.

Johnny Shin: So for example, it could be not now. So new animals only or only to selected animals or apply to all current animals. If you need more filters, just let us know. I think we can add more options. Um so for now I think we can move on.

00:38:33

Johnny Shin: Um so we are so we just decided to to apply this uh workflow only to new animals only to new pet profiles uh moving forward. So finish creation. So voila there's a new workflow in your workflow library as a medical care. So this is it. So this is the workflow creation. um demo. Um so back to you guys, Sarah's, what's your first impression?

Sarah Schertel: Yeah, I I really I actually like those options that you have on like how to how to assign it.

Johnny Shin: Mhm.

Sarah Schertel: Um I think that that's particularly helpful when like let's say um if I get an animal in let's say I I have a local outbreak of some sort of disease, right? And now I need to do separate diagnostics on every animal that's coming in to protect our current population. Um, being able to set up the workflow of like, hey, I already looked at everybody here, like we don't need to worry about this, but I do need to know all of the new animals. Being able to set up that workflow and then toggle it out when we're like in the clear, I think is really helpful.

00:39:57

Sarah Schertel: I had whispered over to Sarah that this could be particularly helpful for like do we does an animal need a manager to review it, right? Does like not every animal necessarily needs to be evaluated by um by myself as the credential behavior um person on staff. um we have another staff member that is like very capable of escalating those things. And so this would be helpful for those types of things of like, hey, we're going to create this workflow. It's only ne necessary with selected animals. That way when our behavior person feels like, hey, something is a little bit out of realm of where I feel comfortable, she can select a workflow for somebody like me or or Sarah to be able to escalate. Hey, I think that we might need some more um some more attention on this.

Johnny Shin: How about chill?

Sarah Schertel: So, I actually really like those options and I can't think of anything else that you would that you would need necessarily. Um, and and this is probably a

question for like a different act, but um I don't think that that you and I talked about how animals get put into the system or how they come out.

00:41:18

Sarah Schertel: And maybe that's something that you guys are kind of rethinking um

Johnny Shin: Right.

Sarah Schertel: with like if this was an add-on to additional softwares um because so for for instance like here it says apply to all current animals how how is an animal current and how is it leaving the system or even coming in for that matter.

Johnny Shin: This is more more on the API side. We are working on it.

Sarah Schertel: Okay.

Johnny Shin: Um um if if

Sarah Schertel: So, it would be API with an existing software.

Johnny Shin: correct um worst case scenario I think it's going to It's going to

Sarah Schertel: Cool. It's really cool.

Johnny Shin: be downloading CSV files from your CRM and then uploading it to our solution. But I know that's not an ideal situation.

Sarah Schertel: Yeah,

Johnny Shin: So we are working uh to to solve that through API.

Sarah Schertel: I'm not.

Johnny Shin: So bear with us. Um yeah to to Tony and and his Yeah.

Sarah Schertel: Oh, I know. It's a process. It's a process.

00:42:23

Sarah Schertel: I totally get it.

Johnny Shin: And his team is working on it. So I will let you know. Uh I mean I think by the time we give you the pilot product I think it's it's going to be done. Um but yeah I I will make sure try to make much much easier for your team um to uh I mean um especially on the data um transfer. So, yeah.

Sarah Schertel: Yeah.

Johnny Shin: Um,

Sarah Schertel: And I think I had mentioned Um I think I had mentioned to you so like

Johnny Shin: how do you how do you Uh-huh.

Sarah Schertel: we have Pzel, right? Which is like a pretty seamless um API for us,

Johnny Shin: Right. Right.

Sarah Schertel: right? Like I mean we could never log into Pzel and they would still get all of the information where it needs to go. Um and that's really where I envision this being like a total gamechanger and and honestly looking like I'm a dreamer, right? So like big picture like this type of layout could be helpful for a lot of things.

00:43:25

Sarah Schertel: It could be helpful for a boarding and daycare operation, could be helpful for a veterinary operation. Like lots of lots of you know switch over here as long as an API can

Johnny Shin: Mhm.

Sarah Schertel: be established. Um you know I think that that that would really be like the niche. Like I I'll be completely honest with you. I'm not going to, you know, download CSV files and and put things in like it's I'm making more work and quite

Johnny Shin: I completely understand.

Sarah Schertel: honestly I'll get lost in the process. Yeah. But but being able to say, "Hey, I'm going to log into Petify, which already has all of the information from Pet Point or Shelter Love or whatever software we're using." Um, and it's just going to like really nicely outline like what my people have to do every day. I think is is really the game changer here.

Tony Kim (Tony): Yeah,

Johnny Shin: Okay,

Tony Kim (Tony): I'll make an expert setting with just one click with the API.

Sarah Schertel: Yes.

00:44:29

Sarah Schertel: Love it.

Johnny Shin: mark his words.

Sarah Schertel: Okay,

Johnny Shin: Um,

Sarah Schertel: I will listen. It's I've been doing a lot of software demos lately and the one thing that nobody can seem to get is API is is an established API with a shelter management software and a veterinary software.

Johnny Shin: H.

Tony Kim (Tony): Yeah.

Sarah Schertel: I I everyone's like, "Oh, we have an open API. You know, you could probably set it up." I'm like, "No, no, no, Sarah. cannot set it up. Like I need it to be done. So,

Johnny Shin: M. It's it's on us. No worries. Um, going back to uh the workflow creation,

Tony Kim (Tony): Uhoh.

Johnny Shin: how do you feel about that? Uh, what does it seem um easy or does it seem a little bit complicated or do you think you need to get a bit more uh friendly with that the whole process? What do you guys think?

Sarah Schertel: cancel. Um, I guess I would just need to see a little bit like maybe another another aspect of it.

00:45:44

Sarah Schertel: Um,

Johnny Shin: H.

Sarah Schertel: to to really know because like I mean just at at first glance it it it seems pretty user friendly. it seems. Mhm. And the I would say it needs a back button like

Johnny Shin: Oh, okay.

Sarah Schertel: um because like what happens to me when there's not a back button, right, is that like I'll get to this stage, the last part, and I'll be like, I don't

remember if I did it correctly and I'm going to hit that X mark and I'm going to start it all over again.

Tony Kim (Tony): Yeah.

Sarah Schertel: Right. So, but can we run through like can we create one more as just like a manager review just so that we can kind of show show through the the thing again.

Johnny Shin: Oh, I Actually, there was a preview. Um, I'm just going to go back.

Sarah Schertel: Yeah,

Johnny Shin: Um,

Sarah Schertel: I was going to say like the the guided demo has a back. Yeah.

Johnny Shin: oh yeah.

Sarah Schertel: So like this seems very easy.

00:46:48

Sarah Schertel: It's just like here step by step. This is the information that we need, right? And then you like like continue and there's a back button here, right? And then you hit create workflow,

Johnny Shin: Mhm.

Sarah Schertel: right?

Johnny Shin: And then the popup.

Sarah Schertel: And then the popup. So okay, so maybe you don't really need a back button because you could just exit and it'll still save it all. But yeah, I mean that's like again much easier than our current Yeah.

Johnny Shin: Yeah, of course.

Sarah Schertel: system.

Johnny Shin: Of course.

Sarah Schertel: Maybe that's what's throwing me off.

Johnny Shin: I get that.

Sarah Schertel: It like it almost looks too easy. Yeah. Like there's not enough am I Yeah. Am I looking at this rock? Yeah. Um and what happens?

Johnny Shin: Um,

Sarah Schertel: What happens if I Okay, let's say I'm in this thing and I'm like, "Ooh, hang on a second. Do I already have existing current animals and I'm trying to decide how I want to apply this?" Right?

00:47:49

Sarah Schertel: Can I open up a new tab without without getting lost on this one?

Johnny Shin: Um,

Sarah Schertel: So,

Tony Kim (Tony): I don't Perfect.

Sarah Schertel: Right.

Johnny Shin: C can you elaborate on what kind of topic you referring to?

Sarah Schertel: So, if I'm in my browser and I'm on this screen and I'm like, hold on a second. I need to look into the software for something else, you know, before I can make this decision. If I were to open up another window on my browser to look at Petify, is it going to take me off of this?

Johnny Shin: Ah.

Sarah Schertel: So, for instance, with our current software, Pet Point, they've made improvements, but when we first started with them, if I was on Fluffy's page on one tab of my browser and I and I

Johnny Shin: Mhm.

Sarah Schertel: wanted to go to Dozer's page on another, right, I would it would automatically kick me out of Fluffy's page.

Tony Kim (Tony): Oh,

Johnny Shin: Oh.

Sarah Schertel: Like,

Tony Kim (Tony): no worries.

Sarah Schertel: I couldn't be two places in one at once under the same username.

00:48:53

Sarah Schertel: Does that make sense?

Johnny Shin: Oh, I think that Tony, I don't think that's going to be a huge problem,

Tony Kim (Tony): Yeah.

Johnny Shin: right?

Tony Kim (Tony): Yeah, sure.

Johnny Shin: Yeah.

Tony Kim (Tony): You don't have to worry.

Johnny Shin: Yeah.

Tony Kim (Tony): uh the screens and any information you've already uh inputted in this area will be stay

Sarah Schertel: Okay, cool.

Johnny Shin: Okay. Um,

Tony Kim (Tony): and Johnny could you show the default setting of this

Johnny Shin: yes.

Tony Kim (Tony): workflows and Sarah I'd like to ask you uh whether this default setting of the workflows are enough to you guys or or we have to set more default settings for you.

Johnny Shin: Got it.

Sarah Schertel: Um,

Johnny Shin: So do you mean by this? Um uh okay

Sarah Schertel: I think you're just talking about those four categories, right?

Tony Kim (Tony): Yeah. Yeah. Four categories.

Johnny Shin: here.

Tony Kim (Tony): Yeah.

Sarah Schertel: Okay.

Tony Kim (Tony): At the first stage.

Sarah Schertel: So, the so the one page back, Johnny.

00:50:00

Tony Kim (Tony): Yeah.

Johnny Shin: Okay.

Sarah Schertel: Um,

Tony Kim (Tony): Welcome back.

Johnny Shin: Yeah.

Sarah Schertel: so I I can I can say that the vaccinations I would break that up into two and I would probably just call it something different. DVM or veterinary action like veterinary tasks versus assistant tasks.

Johnny Shin: Mhm.

Sarah Schertel: Um, so like in the state of Michigan,

Johnny Shin: Um.

Sarah Schertel: a veterinarian has to give a rabies vaccine, but all of the other vaccines and treatment and stuff can be done by an assistant. So really to isolate like what you know,

Johnny Shin: Uh.

Sarah Schertel: surgery has to be done by a a veterinarian,

Tony Kim (Tony): Oh,

Sarah Schertel: right? Um,

Tony Kim (Tony): sure.

Sarah Schertel: but something like administering prevention can be done by an assistant. Um, so I would split that vaccination into just like DVM, medical care and medical care and then the adoption

Johnny Shin: Mhm.

Sarah Schertel: publishing. I would I would almost slip that too because like the getting the getting the paperwork ready for adoption can sometimes take a little bit of time.

00:51:16

Sarah Schertel: Um, so what it was adoption and publishing, vaccinations. I I love the profile upkeep. And I'm about to tell you, I'm about to make so much work for for everybody because I'm about to instate that as a policy. Um, what was the third one? I can't remember what the third one was.

Johnny Shin: Um, I I will show you.

Tony Kim (Tony): Yeah,

Johnny Shin: Um,

Tony Kim (Tony): the list the for list.

Sarah Schertel: behavior

Johnny Shin: yeah. Yeah, I'm going to I'm going to share the full list. Yeah, this was

Sarah Schertel: evaluation. Um behavior. So the industry is sort of moving away from standardized behavior evaluation. Um, I think for the purposes of like of just sort of beta testing this, I would just remove that one. Um,

Johnny Shin: Okay.

Sarah Schertel: well, no, keep it up.

Tony Kim (Tony): That's

Sarah Schertel: And but but I would but I would say it needs to not apply to every animal,

Johnny Shin: Yeah.

Sarah Schertel: right?

Johnny Shin: Yeah.

00:52:28

Johnny Shin: Of course. Yeah. Yeah.

Sarah Schertel: Like that would be one where I I would toggle over to like select animals,

Johnny Shin: Yeah. Yeah.

Sarah Schertel: right?

Johnny Shin: Mhm.

Sarah Schertel: Um because like I'm I'm never going to ask somebody to to like, hey, we just brought in 32 kittens and they all need a behavior evaluation. No, they don't. Like, you know, like we can do that during their medical exam.

Johnny Shin: M

Sarah Schertel: It's not a task that they need to check off. Um, so I would say that um, you know, like I guess where I'm getting stuck is the adoption and publishing. If they're up for adoption, technically there shouldn't necessarily be adoption related tasks associated, right? Um, so I would say like adoption readiness, DVM task, assistant task, behavior task, profile upkeep, you can probably take out, but I'm going to It's a new It's a new policy every month. Yeah. Um, and then foster would be the only other

Tony Kim (Tony): Oh, sir.

Sarah Schertel: one.

00:53:40

Johnny Shin: Got it. I mean again if

Sarah Schertel: And I think that that's an area that we're really struggling with right now, too. So, the integration with we have um, Petbridge is the software that integrates with our website.

Johnny Shin: Mhm. Mhm.

Tony Kim (Tony): Okay.

Sarah Schertel: And so in order to have an animal show on like foster page. We have to it's like a very cryptic like essentially it has to go into an animal reference number somewhere. It has to be spaced out all the same all you know it's it's a whole thing. If we had just something that said like, "Hey, this is foster." It's like really easy.

Johnny Shin: I think yeah I I I we'll look into pet bridge what what that is um any more uh feedbacks? Anything good? Anything bad? anything. Um, like am I I think I would really would like to ask you like does this feel like a realistic way for you guys to define its own workflows.

Sarah Schertel: Yeah, go ahead. Yeah, I think when when uh Sarah was talking about like splitting the vaccination one into two, um like what comes to my mind is is really being able to track those medical treatment

00:55:06

Johnny Shin: Let's

Sarah Schertel: ones that do have an extended set of time before they could be even cleared option. So that would be like maybe uh neonate kittens that we know will not be available for six weeks to get that surgery that make them available and that would be covered in the due date, right? Like so you could filter by like hey these kittens actually don't need to work for three more weeks.

Johnny Shin: start.

Sarah Schertel: Okay. And then you can order it presumably, right?

Johnny Shin: That's also doable,

Sarah Schertel: Um yeah. So, can you toggle over to the dashboard? Or I guess maybe you can't in the demo,

Johnny Shin: of course.

Sarah Schertel: but so if I'm looking at my tasks,

Johnny Shin: Mhm.

Sarah Schertel: can I order them by like type of animal or

Johnny Shin: Due dates. Oh,

Sarah Schertel: due dates or Well,

Johnny Shin: type of animals.

Sarah Schertel: I mean,

Tony Kim (Tony): H.

Sarah Schertel: either way. Yeah. Okay. So, just you could click any one of those at the top and reorder them by last updated or Yeah.

00:56:22

Sarah Schertel: Okay, cool.

Johnny Shin: Right. I think I mean I mean Oh yeah. So there are filters.

Sarah Schertel: Mhm.

Johnny Shin: Um I mean this is very elementary level of filters but we can add more advanced filters.

Sarah Schertel: Sure.

Johnny Shin: Um

Sarah Schertel: But if you were to click at any one of the I keep like pointing to the screen like that's going to help you. Obviously it's not. Um, so like right where you are or where you were just now, like if you were to click um updated, right?

Johnny Shin: Mhm.

Sarah Schertel: Like would it um could we make it so that it like sorted

Johnny Shin: Yeah. Yeah. Yeah.

Tony Kim (Tony): H.

Johnny Shin: Not Not now.

Sarah Schertel: that way?

Tony Kim (Tony): Yeah. S sorting.

Johnny Shin: Definitely.

Tony Kim (Tony): Yeah. Sorting is Yeah. basically available

Sarah Schertel: Okay. It feels like that would be like the easiest thing I've asked you to do.

Tony Kim (Tony): and I think Yeah.

00:57:23

Sarah Schertel: Just like a

Johnny Shin: Why not? Yeah.

Tony Kim (Tony): And I think uh we can provide you a daily digest like some mails to your inbox to let you know uh what you have to do in today.

Sarah Schertel: Mhm.

Tony Kim (Tony): Yeah. depend depending on yeah this dashboard information. Yeah.

Sarah Schertel: Sorry.

Johnny Shin: Oh, actually we we we we did put a bulk action button. Um I realize that now. Um but yeah, bulk actions are are possible.

Sarah Schertel: Okay. Yeah. I think that's especially helpful for let's say a litter of kittens.

Johnny Shin: Um

Sarah Schertel: They all need the exact same vaccination, right?

Johnny Shin: right, right,

Sarah Schertel: Like to be able to just be like,

Johnny Shin: right.

Sarah Schertel: I did it and all of them because most of the time I'm drawing up the vaccines and I'm taking it right to the place where they're being held in the shelter and I'm just doing it really quickly.

Johnny Shin: the the like the other shelters said the the exact same thing.

00:58:26

Johnny Shin: They should do bulk actions especially for the kittens. Um so yeah um uh before we end our

Sarah Schertel: Okay.

Johnny Shin: session um I think our next step would be um drafting a pilot contract. Um so it's uh so this contract will contain um like some involvement on your side when we design and build our product and then we build build you a product and then we give you the product for three uh for free for three months and then we move on to the commercial contract. Uh, would that be okay on your side?

Sarah Schertel: Yeah, I mean I'll be completely honest with you that that without an API with our current software like we wouldn't be able to pursue anything um because we would just be

Johnny Shin: Of course.

Sarah Schertel: complicating too much um and we have too high of a volume to be able to to

Johnny Shin: Or

Sarah Schertel: proceed with that. Um full disclosure too um that Pet Point which is the software we use now um has kind of like softly announced that they are going to be like doing away with their software and creating something completely new.

00:59:49

Sarah Schertel: So, um, we're not looking to go on that journey with them. Um, and so we are looking,

Tony Kim (Tony): Huh?

Johnny Shin: Okay. Mhm.

Sarah Schertel: we're actually looking at acquiring a different software. wear for our shelter management as well.

Johnny Shin: Oh, okay.

Sarah Schertel: And um and that is like likely a two to threeear plan unless something crazy happens and I just decide that we're going to rip the band-aid off. Um, but I would say like for industry knowledge in trying to help you guys get this off of the ground, um, shelter love, so it's shelter luv seems seems to be really like the upand

Johnny Shin: Yeah. Yeah. Yeah.

Sarah Schertel: cominging shelter software right now.

Johnny Shin: Yeah.

Sarah Schertel: And if you were gonna Yeah,

Johnny Shin: A lot of shelters are using

Sarah Schertel: if you were going to focus on an API, that might be the one that that I would recommend focusing on. Like I would love to be like focus on Pet Point so that I can beta this program for you.

01:00:42

Sarah Schertel: But the realistic part of it is is that I think you would be wasting your time trying to set up an API with pet point when like they sort of announced that they're going to be doing something

Tony Kim (Tony): Hi.

Sarah Schertel: different.

Johnny Shin: I mean, but at the end of the day, we our our goal is to be an add-on service for for each shelter. So, so we we need to cozy up with all those different APIs uh from from all those

Sarah Schertel: Yeah. Yeah.

Johnny Shin: different CRM. So, that's on us. We'll we'll try our best.

Sarah Schertel: Yeah. Absolutely. And and maybe Pep Point is like,"Oh my god, wow. This is actually like fits perfectly into our new software." But from from um from our operations standpoint, like I know I wouldn't be able to commit to to doing anything unless there was that that connected API.

Johnny Shin: Yeah. Yeah.

Sarah Schertel: um even on an experimental level.

Johnny Shin: I completely understand. Yeah. Yeah.

01:01:34

Johnny Shin: Yeah.

Sarah Schertel: Um but yeah,

Johnny Shin: I Sure.

Sarah Schertel: it's it's looking more and more like we're probably gonna end up switching to shelter love is the top runner for me right now. But I also have to figure

out a the veterinary software is my top priority. So I've been speed dating softwares which is fun.

Johnny Shin: Um, yeah, it's fun.

Sarah Schertel: Yeah. So, so yeah, I would say next up for me would be like if you guys are able to set up an API with with any of the softwares, I'd be happy to try and connect you with with, you know, whichever organizations I know that are using that software, you know, to see if they could maybe pitch in for a beta.

Johnny Shin: Hello,

Sarah Schertel: Um, but I think it's it's going to be really a tough cell for most shelters um to integrate something that they have to manually put their data into.

Johnny Shin: Sure. Sure. Sure. Yeah. Yeah. That wouldn't be the case actually. Yeah.

01:02:33

Sarah Schertel: Yeah,

Johnny Shin: But yeah, we'll we'll try our best.

Sarah Schertel: that's Yeah,

Johnny Shin: Um, so is it okay to send you a a draft uh of of the pilot? So so so you can always get out of pilot contract because it's not really legally binding.

Sarah Schertel: sure.

Johnny Shin: Um, so um just just look at the draft. Um, and in and and in the meantime, we'll we'll figure things out with the API

Sarah Schertel: Yeah, absolutely. I'm Yeah, I'm always willing to look at it. I just want to be open and honest that that it probably won't end up moving anywhere without that.

Johnny Shin: Oh, sure. Yeah, of course.

Sarah Schertel: So,

Johnny Shin: Of course.

Sarah Schertel: awesome. Well,

Johnny Shin: Okay.

Sarah Schertel: thank you guys so much. It seems like you guys have like done a ton of work on this and I'm super excited to see how it comes out in the end, but um but yeah,

Johnny Shin: Thank you so so much.

Sarah Schertel: feel free to over and uh we'll connect when we can.

Johnny Shin: Yeah.

Sarah Schertel: All right.

Johnny Shin: Have a great day,

Sarah Schertel: It's nice to meet you.

Johnny Shin: guys. Thank you.

Sarah Schertel: Thank you.

Johnny Shin: So, thank you Sarah.

Tony Kim (Tony): Yeah. Thank you.

Johnny Shin: Bye-bye.

Tony Kim (Tony): Thank you for

Sarah Schertel: Sleep well.
